

■ **GM FleetView**

Phone: 1300 559 696 or contact your GM account manager

Available for the Commodore Sedan, Commodore Wagon, Statesman and Caprice, GM FleetView is designed to enhance fleet efficiency by relaying trip and vehicle details directly from the vehicle.

An in-vehicle interface unit retrieves data from the vehicle's electronic systems, such as driving time, idle time, battery level, fuel level, fuel refills, odometer readings, service alerts and over-speed alerts. This information is transmitted via GSM mobile network technology to FleetView's secure data-storage facility. Fleet managers can then access and report on the captured journey information through FleetView's web-based application portal.

Automated FBT compliance is one of FleetView's most appealing features: when a driver switches on the ignition, they simply respond to an automated prompt and enter whether the journey is business or private.
