

SUNA joins forces with ECLIPSE to deliver real-time traffic information to Australian motorists

Melbourne, 07 April 2009 – Intelematics Australia has further extended its partnership network with the announcement that SUNA is now available on an exclusive range of ECLIPSE in-car GPS navigation systems.

SUNA is Australia's first digital traffic information service which broadcasts detailed information on traffic congestion and other road conditions directly to motorists GPS devices, in real-time.

The new AVN726EA and the AVN4400 models will both offer SUNA to help motorists avoid unnecessary delays and ensure a stress free driving experience for Eclipse customers.

Commenting on the new partnership, Damien Jaffe, ECLIPSE Manager, Fujitsu Ten Australia, said, "Partnering with Intelematics Australia was a logical next step for us to ensure we were delivering maximum product functionality to our customers. The real-time information provided by the SUNA service is the perfect complement to Eclipse's navigation capabilities."

Adam Game, Chief Executive Office, Intelematics Australia said the new alliance would build on the company's already well established partner network in the GPS navigation industry and help drive the SUNA brand in to the high-end in-car navigation market.

"We are delighted to be joining forces with ECLIPSE to provide real-time traffic information to their customers. The SUNA service has been very well received by the local navigation industry and this new partnership enables us to deliver the service to a wider range of motorists."

SUNA is currently available in Melbourne, Sydney and Brisbane with plans to offer the service in other capital cities including Perth, Adelaide and Canberra later this year.

SUNA's unique infrastructure provides an unmatched depth of coverage in major metropolitan areas. SUNA's proprietary systems monitor traffic conditions using the tens

of thousands of traffic sensors driving modern traffic lights, supplemented with other sources including probe vehicles, freeway sensors, tow truck allocations, roadwork information, special events and expert camera observers.

The AVN726EA & AVN4400 are scheduled to go on sale in April 2009. RRP is not available at this time.

Motorists can find out more information on SUNA by visiting www.sunatraffic.com.au.

About Intelematics Australia

Intelematics Australia is a wholly owned subsidiary of the RACV and is a founding member of Global Response – a strategic telematics alliance covering Europe, North America and Australia, with more than 80 million motoring club members.

Globally recognised for innovation, Intelematics Australia's services include safety and security, fleet and workforce management, real-time traffic information and navigation, together with a range of real-time motorist information and convenience services. Intelematics also provides enhanced remote vehicle diagnostic and eCRM services.

Intelematics Australia is a leading provider of OEM telematics programs within the Asia Pacific region and works in partnership with its clients to create tailored programs that bring benefit to vehicle manufacturers, their maintenance and retail channels, and motorists.

Intelematics' award-winning Telematics Services Hub (TSH) is a custom-designed, OEM-grade platform that separates service provision from underlying vehicle hardware. The TSH platform provides the Australian telematics programs for General Motors Holden, Toyota Motor Company Australia and Mitsubishi Motors Australia. The TSH also supports the aftermarket telematics Motoring Club product CarCom.

SUNA Traffic Channel, operated by Intelematics, has been adopted by leading navigation brands including Garmin, Mio, Navman, Navway, Pioneer, TomTom, Uniden, and Ford Motor Company.

The RDS-TMC service currently covers more than 70 per cent of metropolitan Australia with coverage in VIC, NSW, and QLD, and will reach ACT, SA, and WA by mid-year. SUNA is Australia's only digital traffic service broadcast using the international RDS-TMC standard which is supported by most GPS and automotive brands. SUNA content is also offered to developers of online and smart-phone applications.
